IMMUTA + **looker**

A faster, secure, frictionless way to **govern data** used for BI and analytics.

Immuta and Looker provide data-driven businesses with the control, security and governance they need when sensitive data is used for BI and analytics. With Immuta, Looker admins can manage data access with global, automated policies – not permissions. Now you can spend more time analyzing data and less time worrying about data access control or compliance with the law.

Looker + Immuta Benefits

Immuta's Automated Data Governance platform enables Looker users to perform business intelligence and analytics faster, and more securely, by ensuring data governance policies are automatically applied to every Looker query.

With Immuta in place, Looker admins can manage user access to data via global policies – not user-specific permissions. For Looker users, the experience is frictionless – they can continue to run reports and visualize data while Immuta ensures they see only what they're supposed to see, for their role and purpose.

Fine-grained (row, column & cell-level) access to sensitive data accessed via Looker.

Compliant Looker analytics – CCPA, GDPR, and more.

Secure data sharing and data projects with automated governance.
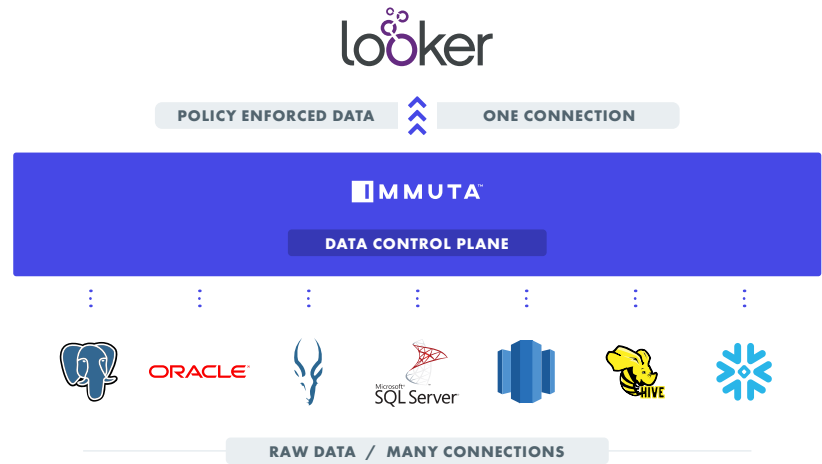

IMMUTA

Immuta – the leading automated data governance platform – provides instant, secure, self-service access to all your enterprise data with continuous, always-on data governance. With Immuta, employees across your company can harness data to innovate and gain competitive advantage, without worrying about data misuse, breaches or fines. Global leaders in finance, healthcare, government, manufacturing and more trust Immuta to automate their data governance.

looker

Looker is a unified data platform that delivers actionable business insights to employees at the point of decision. Looker integrates data into the daily workflows of users to allow organizations to extract value from data at web scale. Over 1,800 industry-leading and innovative companies such as Sony, Amazon, The Economist, IBM, Etsy, Lyft and Kickstarter have trusted Looker to power their data-driven cultures.
Architecture

Immuta lets Looker admins author data governance policies by data source, by role, by project, by purpose, and more. As a result, admins can author policies once and enforce them dynamically across all data sources queried by Looker users.
