

## About Immuta

Immuta enables organizations to unlock value from their cloud data by protecting it and providing secure access. The Immuta Data Security Platform provides sensitive data discovery, security and access control, data activity monitoring, and has deep integrations with the leading cloud data platforms. Immuta is now trusted by Fortune 500 companies and government agencies around the world to secure their data. Founded in 2015, Immuta is headquartered in Boston, MA.

<b>Mission</b>	Make the future of data secure.
<b>Vision</b>	Do right with data.
<b>Founded</b>	2015
<b>CEO</b>	Matthew Carroll
<b>Leadership Team</b>	Visit <a href="https://www.immuta.com/leadership">immuta.com/leadership</a>
<b>Employees</b>	250+
<b>Locations</b>	Headquartered in Boston with offices worldwide
<b>Funding</b>	\$267 million in total venture capital funding (\$100M Series E was in May 2022)

## Investors

NightDragon, Greenspring Associates, March Capital, Ten Eleven Ventures, Intel Capital Corporation, NGP Capital, DFJ Growth, Dell Technologies Capital, Citi Ventures, Inc, Wipro Ventures, Okta Ventures, and ServiceNow.

## Customers

World-class organizations choose Immuta to help keep their most sensitive data secure at scale. Immuta's customers include numerous Fortune 500 companies, mid-size enterprises, and leading tech firms. Notable customers include Accolade, Acorns, Blue Cross Blue Shield, Cognoa, Cummins, Defense Health Agency, Eisai, J.B. Hunt, JPMorgan Chase, John Deere, LMI, Mercedes-Benz Group, Pumpjack Dataworks, Roche, S&P Global, Sony, Swedbank, WorldQuant Predictive, and many more.

## Partners

Immuta partners with the world's leading technology and solutions providers to protect and govern customers' data across modern data stacks. Notable partners include Snowflake, Databricks, Starburst, Amazon, Google, and Microsoft. Immuta integrates natively with each of those cloud data platforms.

# Data Security Platform Capabilities

## Discover—Sensitive Data Discovery & Classification

Discover sensitive data from millions of fields without manual effort, and apply 60+ prebuilt classifiers alongside domain-specific and custom classifiers. Assess your sensitive data footprint by profiling registered tags such as PII, PHI, or others. Enable different teams in your organization to inspect and approve classification tags through workflows.

## Secure—Security & Data Access Control

Build data policies in plain language or as code so that your team can work together. Policies are enforced automatically in real time across teams and regions. Immuta's modern access control approach using attribute-based access control (ABAC) delivers scalable data access without the challenges of role explosion. With dynamic data masking, you can strike the balance between privacy and utility so the right users can access the right data.

## Detect—Continuous Data Security Monitoring

Leverage timely insights into data access and user activity with anomaly indicators for faster analysis, risk remediation, and proactive actions. Immuta enables data security posture management via an analysis engine with sensitivity level and risk profile indicators to safeguard and mitigate threats. You also receive notifications, alerts, and audit reports to easily prove compliance.

## Benefits

VALUE	HOW IMMUTA HELPS
<b>Simplify operations</b>	Immuta's dynamic access control and policy management requires <b>93x fewer data policies</b> . It is simpler and more scalable, which improves change management and lowers the overall TCO of cloud data management.
<b>Improve data security</b>	Immuta makes it possible to prove compliance with rules and regulations, even when <b>securing hundreds of thousands of tables</b> . And, with continuous activity monitoring, Immuta enables data and security teams to proactively identify and remediate risk.
<b>Unlock data's value</b>	Immuta helps organizations get <b>100x faster data access to more data</b> , which translates to improved productivity. With Immuta, more data can safely reside in the cloud, more users can access that data, and more data products can be deployed – all with less risk.
